CLIENT GUIDE

# Smart Lead Scoring & Pipeline System

BizCivitas Performance Marketing

Automatically identify your most interested leads, prioritize follow-ups, and convert more visitors into paying members.

| DOCUMENT | VERSION | DATE |
| --- | --- | --- |
| Client Overview | 1.0 | March 2026 |

SECTION 01

# Why Lead Scoring Matters

Not all visitors are equal. Some are ready to buy today, others are just browsing. This system tells you who is who — automatically.

## The Problem

**WITHOUT LEAD SCORING**

- All inquiries look the same
- Sales team wastes time on cold leads
- Hot leads slip through the cracks
- No way to know who's really interested
- Follow-ups are guesswork
- No data on visitor behavior

**WITH LEAD SCORING**

- Every lead gets a score based on real behavior
- Focus on the leads most likely to convert
- Hot leads are flagged immediately
- Know exactly what each visitor did on your site
- Data-driven follow-up priority
- Full activity history per lead

## The Business Impact

**5x**
FASTER LEAD PRIORITIZATION

**100%**
AUTOMATED SCORING

**Zero**
MANUAL WORK REQUIRED

**Bottom Line:** Your sales team spends less time guessing and more time closing. The system watches every visitor's behavior and tells you who deserves immediate attention.

SECTION 02

# How It Works

The system silently tracks visitor behavior and builds a score. No forms, no surveys — just real behavior data.

## The Journey in 4 Steps

1. **Visitor arrives on your website**
   The moment someone lands on your performance marketing page, tracking begins automatically. Every scroll, every click, every second spent — it all counts.

2. **Behavior is scored in real-time**
   Each action earns points. Browsing for 30 seconds? +3 points. Checking pricing? +15 points. Starting to fill a form? +8 points. The score builds silently.

3. **Lead is categorized into a pipeline stage**
   Based on their total score, the visitor is automatically placed into New, Cold, Warm, or Hot. Your team instantly knows who to prioritize.

4. **Payment converts the lead**
   When a lead completes payment through Razorpay, they become "Converted" — regardless of their score. Payment is the ultimate proof of intent.

> **Fully Automatic:** No manual tagging, no subjective judgment. The system assigns scores based on actual behavior, ensuring consistent and unbiased lead evaluation.

## What's Being Tracked?

The system watches **11 different types of user behavior**, each worth a different number of points based on how strong a buying signal it represents:

### Browsing Signals

Page visits, return visits, time spent on page, scroll depth, multiple pages viewed

### Intent Signals

CTA clicks, pricing page visit, form started, form submitted, file downloads

SECTION 03

# The Lead Pipeline

Every visitor flows through 5 clear stages. You always know where each lead stands.

| NEW | COLD | WARM | HOT | CONVERTED |
|---|---|---|---|---|
| 0–10 pts | 11–25 pts | 26–50 pts | 51+ pts | Paid |

| STAGE | SCORE RANGE | WHAT IT MEANS | RECOMMENDED ACTION |
|---|---|---|---|
| NEW | 0 – 10 | Just landed on the website, minimal engagement | No action needed yet — let the system track |
| COLD | 11 – 25 | Browsing with some interest, not deeply engaged | Nurture with content (email, retargeting) |
| WARM | 26 – 50 | Actively engaging, exploring pricing or filling forms | Prioritize for follow-up call or message |
| HOT | 51+ | Very high engagement, strong buying intent | **Immediate outreach!** This lead is ready |
| CONVERTED | Payment done | Completed Razorpay payment, now a member | Onboard, welcome, and retain |

**Key Rule:** A lead never goes below "Converted" once they pay. Payment is permanent — it overrides any score-based classification. Even if a converted member's score drops later, they stay as "Converted" forever.

## Score Thresholds are Adjustable

The boundaries between stages (11, 26, 51) are **not fixed**. You can change them from the admin panel at any time. For example, if you want leads to reach "Warm" faster, lower the warm threshold from 26 to 20.

SECTION 04

# What Earns Points

Every user action on your website is worth a specific number of points. Higher points = stronger buying signal.

## Default Scoring Events

| USER ACTION | POINTS | SIGNAL STRENGTH | WHAT IT TELLS YOU |
|---|---|---|---|
| **Page Visit** | +2 | Low | User is browsing — basic interest |
| **Stay 30 Seconds** | +3 | Low | Reading content, not just bouncing |
| **Scroll 50%+** | +3 | Low | Engaging with page content |
| **Return Visit** | +5 | Medium | Came back! Thinking about it seriously |
| **CTA Button Click** | +5 | Medium | Clicking call-to-action — wants to learn more |
| **Stay 2 Minutes** | +8 | Medium | Deep reading — seriously evaluating |
| **Started Filling Form** | +8 | High | Began entering details — strong intent signal |
| **Downloaded a File** | +10 | High | Saving information for later review |
| **5+ Pages Visited** | +10 | High | Thorough research across the website |
| **Pricing Page Visit** | +15 | Very High | Checking costs — considering purchase! |

| USER ACTION | POINTS | SIGNAL STRENGTH | WHAT IT TELLS YOU |
|---|---|---|---|
| **Form Submitted** | +20 | Very High | Submitted inquiry — wants to be contacted |

**All scores are customizable.** If you feel "Pricing Page Visit" should be worth +25 instead of +15, you can change it from the admin panel. No developer needed.

SECTION 05

# Real-World Examples

See how different visitor behaviors translate into pipeline stages.

## Example 1: Quick Bounce

Lands on page **+2** → Leaves immediately = **2 pts** **NEW**

*Minimal engagement. Not worth following up on.*

## Example 2: Casual Browser

Visit **+2** → 30 sec **+3** → Scroll **+3** → CTA click **+5** = **13 pts** **COLD**

*Some interest, but not strong enough for immediate follow-up. Add to nurture campaign.*

## Example 3: Serious Prospect

Return visit **+5** → 2 min read **+8** → Pricing page **+15** → Form started **+8** = **36 pts** **WARM**

*Came back, checked pricing, started the form. This person is seriously considering! Follow up within 24 hours.*

## Example 4: Ready to Buy

All above **+36** → Form submitted **+20** → Pricing again **+15** = **71 pts** **HOT**

*Submitted inquiry AND went back to pricing page. This lead is ready to buy — call them NOW!*

## Example 5: Full Conversion

Score: 71 **HOT** → Razorpay Payment = **PAID** **CONVERTED**

*Payment completed! Lead becomes a member. Account created, welcome email sent.*

SECTION 06

# Your Admin Panel

You have full control over the scoring system from the admin dashboard — no developer needed.

## What You Can See

### Inquiries Page (`/admin/inquiries`)

Every lead now shows two new columns:

| COLUMN | WHAT IT SHOWS | EXAMPLE |
|---|---|---|
| **Score** | Color-coded engagement score | 38 |
| **Pipeline** | Current pipeline stage badge | WARM |

Click on any lead to see their **complete activity timeline** — every action they took on your website with timestamps.

## What You Can Control

### Scoring Page (`/admin/scoring`)

#### Adjust Scores

Change how many points each action is worth. Make "Pricing Visit" worth +25 instead of +15 if that's more important to your business.

#### Toggle Events On/Off

Disable any event from scoring. If "Scroll 50%" doesn't matter to you, just toggle it off — it won't count anymore.

#### Change Pipeline Thresholds

Adjust when leads move from Cold to Warm to Hot. Lower thresholds = leads move faster through the pipeline.

#### Add Custom Events

Create your own scoring events. E.g., "Video Watched" (+12), "Testimonial Clicked" (+7), "Chat Initiated" (+8).

### Score Decay Settings

Configure how quickly inactive leads lose their score. Keeps your pipeline fresh and accurate.

### Reset to Defaults

Made too many changes? One click to reset everything back to the original scoring values.

SECTION 07

# Custom Scoring Events

Create your own scoring events to track what matters most to your business.

## How It Works

The system comes with 11 built-in events that cover the most common user behaviors. But every business is unique — you might want to track additional actions specific to your marketing strategy.

### Built-in Events (System)

- Cannot be deleted (they're core to the system)
- Scores can be adjusted
- Can be toggled on/off
- Labels and descriptions cannot be changed

### Custom Events (Your Own)

- Add as many as you want
- Fully editable (name, score, description)
- Can be deleted if no longer needed
- Can be toggled on/off

## Example Custom Events You Might Create

| EVENT NAME | POINTS | WHY TRACK IT |
|---|---|---|
| Video Watched | +12 | User watched your intro/demo video — very engaged |
| Testimonial Clicked | +7 | Looking at social proof — considering purchase |
| Chat Initiated | +8 | Proactively reaching out — wants answers |
| Comparison Page View | +10 | Comparing plans/options — in decision phase |

| EVENT NAME | POINTS | WHY TRACK IT |
|---|---|---|
| Brochure Download | +10 | Saving material for offline review or sharing |
| Referral Link Shared | +15 | Sharing with others — already a champion |

**Adding a custom event:** Go to `/admin/scoring` → scroll to "Custom Events" section → click "Add Event" → enter name, points, and description → Save. The system starts tracking it immediately.

SECTION 08

# Score Decay

Keeping your pipeline fresh by reducing scores for inactive leads.

## The Problem It Solves

Imagine a lead who visited your site 3 months ago, scored 55 points (Hot), but never came back. Are they still "Hot"? Probably not. Score decay ensures your pipeline stays accurate over time.

## How It Works

**30**

**Days of Inactivity**

After 30 days without any activity, the decay triggers (configurable)

**-10**

**Points Deducted**

10 points are removed per decay cycle (configurable)

## Decay Examples

| LEAD | ORIGINAL SCORE | ORIGINAL STAGE | AFTER DECAY | NEW STAGE |
|---|---|---|---|---|
| Lead A (inactive 30 days) | 55 | HOT | 45 | WARM |
| Lead B (inactive 30 days) | 30 | WARM | 20 | COLD |
| Lead C (inactive 30 days) | 8 | NEW | 0 | NEW |

| LEAD | ORIGINAL SCORE | ORIGINAL STAGE | AFTER DECAY | NEW STAGE |
|---|---|---|---|---|
| Lead D (PAID member) | 70 | CONVERTED | 70 | CONVERTED (no change) |

**Converted leads are never decayed.** Once someone has paid, they remain "Converted" permanently — no matter how long they've been inactive.

## Configurable Settings

| SETTING | DEFAULT | WHAT YOU CAN CHANGE |
|---|---|---|
| Enable/Disable | Enabled | Turn off decay entirely if you prefer scores to be permanent |
| Inactive Days | 30 days | Increase to 60 days for slower decay, or reduce to 14 days for faster |
| Decay Amount | 10 points | Increase for aggressive cleanup, decrease for gradual reduction |

SECTION 09

# Activity Timeline

Every lead has a complete history of their behavior on your website.

## What You See Per Lead

When you click on any inquiry in the admin panel, you can see their complete activity log:

**Rajesh Kumar**

rajesh@company.com • +91 98765 43210

Engagement Score

**38**

WARM Last activity: Form Submitted

ACTIVITY TIMELINE

- Mar 16, 10:05 AM
  Form Submitted +20
- Mar 16, 10:03 AM
  Form Started +8
- Mar 16, 10:02 AM
  Stayed 2 Minutes +8
- Mar 16, 10:00 AM
  Page Visit +2

## How to Use This Information

### Before Calling a Lead

Check their activity log to understand what they looked at. If they visited the pricing page, lead with pricing. If they downloaded a brochure, they want details.

### Identify Drop-off Points

If many leads start the form but don't submit, something is wrong with the form. The activity data helps you improve your funnel.

SECTION 10

# Filtering & Prioritization

Use pipeline stages to filter and prioritize your sales efforts.

## Admin Panel Filters

The inquiries page lets you filter leads by pipeline stage:

| FILTER | WHAT YOU SEE | BEST FOR |
|---|---|---|
| HOT | Leads scoring 51+ points | Immediate sales outreach — call these first! |
| WARM | Leads scoring 26–50 points | Follow-up within 24–48 hours |
| COLD | Leads scoring 11–25 points | Add to email nurture campaign |
| NEW | Leads scoring 0–10 points | Monitor for activity growth |
| CONVERTED | Paid members | Onboarding & retention focus |

## Recommended Sales Workflow

1. **Start with HOT leads every morning**
   Filter by "Hot" — these are your highest-intent visitors. Call or message them immediately. They were just about to buy.

2. **Work through WARM leads next**
   These people showed real interest. A well-timed follow-up can push them to Hot or Converted. Check their activity log for talking points.

3. **Nurture COLD leads with content**
   Send them helpful content, case studies, or testimonials via email or WhatsApp. They're aware of you but not convinced yet.

4. **Let NEW leads grow organically**
   These are just browsers. Don't waste resources chasing them. The system will notify you if they

become warmer.

> **Pro Tip:** Check the admin panel at the start and end of each day. New Hot leads can appear at any time as visitors engage with your website.

SECTION 11

# Data & Privacy

How visitor data is handled responsibly.

## What Data Is Collected

| DATA TYPE | WHEN COLLECTED | PURPOSE |
|---|---|---|
| Behavioral actions (clicks, scrolls, time) | During website visit | Calculate engagement score |
| Session identifier | First page visit | Group actions in one session |
| Return visit flag | On return visits | Identify returning visitors |
| Personal info (name, email, phone) | Only when user submits the inquiry form | Lead management & follow-up |

**Important:** No personal information is collected until the visitor voluntarily submits the inquiry form. Before that, only anonymous behavioral data is tracked in the browser's session storage.

## Data Storage

### Before Form Submit

Events stored only in the visitor's browser (sessionStorage). Nothing is sent to the server. Data disappears when the tab closes.

### After Form Submit

Events are synced to the server and permanently stored with the lead record. Full activity history is available in admin.

## Access Control

- Only **admin users** can access lead data and scoring configuration

- Admin panel is protected by **JWT authentication** with httpOnly cookies
- Public tracking endpoints only accept anonymous event data
- Scoring configuration requires admin authentication to modify

## Data Retention

Lead data and activity logs are stored indefinitely for business intelligence. Score decay reduces scores but does not delete activity logs — you can always see the full history of a lead's engagement even after decay reduces their current score.

SECTION 12

# Frequently Asked Questions

Common questions about the lead scoring system.

### Q: Can I change the scoring values?

Yes! Go to `/admin/scoring` in the admin panel. You can adjust every event's point value, toggle events on/off, and change pipeline thresholds. No developer needed.

### Q: What happens if I change a score after leads already have points?

Existing lead scores are NOT retroactively changed. The new scores only apply to future events. If a lead already earned 15 points for "Pricing Visit" and you change it to 25, their existing 15 points stay.

### Q: Can a lead go from Hot back to Warm?

Only through score decay. If a Hot lead is inactive for 30+ days, their score decreases and they may drop back to Warm. Active leads never lose points.

### Q: Can a Converted lead ever lose their status?

No, never. Once payment is verified, "Converted" is permanent. Score decay does not affect converted leads.

### Q: Does the tracking slow down my website?

No. Tracking runs silently in the background using lightweight browser events (scroll listeners, timers). No visible impact on page load or user experience.

### Q: What if a lead visits from different devices?

Pre-inquiry events are session-based (per browser tab). Once the lead submits the inquiry form, all future tracking is linked to their email address across devices.

### Q: Can I add my own custom scoring events?

Yes! From the admin panel, you can create unlimited custom events with any name and point value. You can also edit and delete custom events anytime.

### Q: How often should I check the admin panel?

We recommend checking Hot leads at least twice daily (morning and evening). Warm leads should be reviewed daily. Cold and New leads can be checked weekly.

### Q: Can I reset everything to default values?

Yes. The scoring configuration page has a "Reset to Defaults" button that restores all 11 system events to their original scores and resets thresholds and decay settings.

### Q: Is the data shared with anyone?

No. All lead data stays in your BizCivitas database. It is only accessible to authenticated admin users through the admin panel.

SECTION 13

# Quick Reference Card

Keep this page handy for a quick overview of your lead scoring system.

## Pipeline Stages at a Glance

| NEW | COLD | WARM | HOT | CONVERTED |
|---|---|---|---|---|
| 0–10 | 11–25 | 26–50 | 51+ | Paid |

## Top Scoring Events

**+20**
**Form Submitted**
Highest intent signal

**+15**
**Pricing Page**
Checking costs

**+10**
**File Download**
Saving information

## Key Admin URLs

| PAGE | URL | WHAT YOU DO THERE |
|---|---|---|
| Lead Management | `/admin/inquiries` | View all leads with scores and pipeline stages |
| Scoring Settings | `/admin/scoring` | Customize scores, thresholds, decay, custom events |
| Dashboard | `/admin` | Overview of all inquiry statistics |

## Daily Checklist

☐ Check HOT leads — call/message immediately

- ☐ Review **WARM** leads — follow up within 24 hours
- ☐ Check new inquiries that came in overnight
- ☐ Review activity logs of leads you're about to call
- ☐ End of day: Review any leads that moved from Cold to Warm
